                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                685
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ATCGAATTCTTTCGGACTTTTGAAAGTGATGGTGGTGGGGGAAGGATTCGAACCTTCGAA 528
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This COS cell expression vector was constructed from pisv (Little et al., Mol. Biol. Med. 1:473-488 (1983)) by inserting a synthetic transcription unit between the suppressor tRNA gene and the SV40 origin. The transcription unit consisted of a chimeric promoter composed of human cytomegalovirus AD169 immediate early enhancer sequences fused to the HIV LTR -67 to (plus)80 sequences. A polylinker contg. 2 BstXI sites separated by a 350bp stuffer was inserted immediately downstream from the LTR (plus)80 sequence. Downstream from the polylinker were placed the SV40 small tantigen splice and early region polyadenylation signals derived from pSV2. The new vector, which forms part of the wider disclosure of the specification, was used in the cloning of the human CD2
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CCGCTGTAAAGTGTTACGTTGAGAAAGAATTCCTGCAGCCCGCCGCGTTGCTGGCGTTTT

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Expression vector piH3 (AAT38557), deposited as ATCC 67634, can be used in a novel immunoselection cloning method for cell surface antigen genes, e.g. human CD19 (see also AAT38556). This involves introducing CDNA fragments into the vector, transfecting mammalian cells in culture, maintaining the cells under conditions that allow antigen expression, exposing the cells to an antibody directed against the antigen, and recovering positive cells by contact with an immobilised antibody directed against the first antibody.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      768
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       828
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         448
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Cloning of cDNA encoding cell surface antigen - useful for isolation of diagnostic and therapeutic proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Vector piH3 (AAT14702) is a COS cell expression vector constructed from piSV by inserting a synthetic transcription unit between the suppressor tRNA gene and the SV40 origin. This novel vector allows the generation of very large mammalian expression libraries and yields large amounts of protein in mammalian host cells, resulting in efficient selection. Efficiency of library construction is comparable to that achieved with phage lambda, but the clones generated are easier to manipulate. A novel immunoselection cloning method was used to clone genes (see also AAT14703-04 and AAT14706-26) for cell surface antigens of human lymphocytes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       469 ATCGAATTCTTTCGGACTTTTGAAAGTGATGGTGGTGGGGGAAGGATTCGAACCTTCGAA

This is the nucleotide sequence of expression vector piH3, a COS cell expression vector constructed from piSV by inserting a synthetic transcription unit between the suppressor tRNA gene and the SY40 origin. The vector can be used in a novel method for cloning cDNAs from mammalian expression libraries. The method is cloning cDNAs from mammalian expression libraries. The method is immunoselection of cells expression of an antigen in eukaryotic cells and inmunoselection of cells expression of an antibody-coated substrate. The method is useful for the can antibody-coated substrate. The method is useful for the capressed and transported to the cell surface membrane of a cukaryotic cell. It has been used to clone genes encoding cell surface antigens associated with mammalian T lymphocyte antigens such as CDI-53. IRA-3, ICAM-1, FRI, TLISA and Leuß (see AAV63442-63 and AAW80440-55). The invention provides high efficiency expression vectors, such as piH3, which allow the generation of very large mammalian expression libraries, and yield large amounts of protein in mammalian host cells, resulting in efficient selection. The purified genes and proteins are useful for immunodiagnostic and immunocherapeutic applications, including the diagnostic and immunocherapeutic applications.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  469 ATCGAATTCTTTCGGACTTTTGAAAGTGATGGTGGGGGGAAGGATTCGAACCTTCGAA 528

This is the nucleotide sequence of expression vector piH3, a COS cell expression vector constructed from piSV by inserting a cell expression vector constructed from piSV by inserting a synthetic transcription unit between the suppressor tRNA gene and the SV40 origin. The vector can be used in a novel method for cloning cDNAs from mammalian expression libraries. The method is based on transient expression of an antigen in eukaryotic cells and physical selection of cells expressing the antigen by adhesion to an antibody-coated substrate, such as a culture dish. The method is useful for the isolation and molecular cloning of any protein which can be expressed and transported to the cell surface membrane of a eukaryotic cell. The invention specifically provides the CD40 c DNA sequence (see AAV81198). It also provides high efficiency expression vectors, such as pH3, which allow the generation of very large mammalian expression libraries, and yield large amounts of protein in mammalian host cells, resulting in efficient selection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cDNA encoding human CD40 antigen - useful for cloning cDNA encoding cell surface antigens, constructing cDNA libraries, expression vectors for expression in eukaryotic cells or their fragments

                                                                                                                                                                                                                                                 LTR
```

```
the Syd Origin. The transcription unit between the suppressor tRNA gene and the Syd Origin. The transcription unit consisted of a chimeric promoter composed of human cytomegalovirus ADIG6 immediate early enhancer sequences fused to the HIV LTR -67 to +80 sequences.

Immediately downstream from the LTR +80 was inserted a polylinker containing 2 BSKIX itses separated by a 350 bp stuffer. The BSKIX sites were flanked by Xbal sites, which could also be used to excise the insert. Downstream from the polylinker were placed the Syd 0 small t antigen splice and early region polyh signals derived from pSV2. The vector can be used to construct large mammalian cDNA expression libraries. A new method for cloning cDNA encoding cONA expression libraries. A new method for cloning cDNA enciding the antigen by adhesion to (panning on) an antibody expressing the antigen by adhesion to (panning on) an antibody coated substrate such as a culture dish. The purified cDNA and immunotherapeutic applications, including the diagnosis and immunotherapeutic applications, including the diagnosis and immunor-complex disease, amyloidosis, parasitic diseases or multiple scherolist in the invention, including large amounts of protein in mammalian host cells, resulting in efficient selection.

The present sequence for expression vector piH3 is used to provide
high level expression of human lymphocyte cell surface antigens in
eukaryotic host cells. Another expression vector piH3M (AASO3174)
is also described. Various human lymphocyte cell surface antigen cDNA
sequences (AASO3172, AASO3173, AASO3195) are described
celating to the invention of a novel method of cloning cDNA
celating to the invention of a novel method of cloning cDNA
inbraries. A genetically engineered CDNA sequence encoding the CD28
amino acid extracellular domain sequence (amino acids 1-134 given in
AAUO1437) and/or comprising nucleotides 100-759, 154-555 or 154-759 of
the CD28 cDNA sequence (AASO3175) is also new. The purified genes and
proteins are useful for immunodiagnostic and immunocherapeutic
control of the control of disorders in animals and humans. Such diseases
include immune deficiency diseases, diseases of immediate type of

lentivirus genome. These vectors comprise a deleted gag gene. The deletion in gag removes one or more nucleotides downstream of nucleotide from the non-primate lentivirus genome or lack the tat gene but includes from the non-primate lentivirus genome or lack the tat gene but includes the leader sequences between the end of the 5' long terminal repeat (LTR) and the ATG of gag. The vectors, particles or cells transfected with either of these, are useful for the delivery of nucleotides of interest to a target site (i.e. gene therapy). The retroviral vector can be used as a delivery system. Alternatively, a non-retroviral expression vector, adenovirus or plasmid can be used as a delivery system for the retroviral wectors are capable of transferring genetic material to non-dividing or slowly dividing cells. Deletion of larger regions of the gag gene in Equine infectious anemia virus (EIAN) vectors is advantageous and leads to higher titers of viral vector being produced. Deletion of accessory genes permits vectors to be produced without the genes normally associated with disease in lentiviral (e.g. HIV) infections. The deletion of these genes also permits the vector to invention provides retroviral vectors derived from a non-primate package more heterologous DNA.

```
This sequence represents the recombinant expression plasmid FBdelPASAF.

This sequence is a packaging-deficient construct having a viral env gene (in this case from RDI14) and a selectable matrem (8M). It is an example of a recombinant expression vector (REV) of the invention, used to create a packaging cell line. The REVS of the invention comprise a gene of the second and a GOI associated stop codon is spaced from a start codon of the COI and a GOI associated stop codon is spaced from a start codon of the COI and a GOI associated stop codon is spaced from a start codon of the COI and a GOI associated stop codon is spaced from a start codon of the COI and a GOI associated stop codon is spaced from a start codon of the COI and a GOI associated stop codon is spaced from a start codon of the COI and a GOI associated stop codon is spaced from a start codon of the COI and a GOI associated suppressed as a result of the cut and series of the cell lines are replication. The cell lines are transformed with two REVS, both are replication deficient, one contains the viral gene, high titre retroviral vectors may be obtained. The packaging cell lines are useful for gene therapy. Prior packaging cell lines are useful for gene therapy. Prior packaging cell ince useful for gene therapy. Prior packaging cell solated by cotransfecting them with plasmids encoding selectable markers. However, the helper functions can be lost during the passages of the cells in culture and the current packaging systems provide limited titres of infectious retroviral vectors. Co-transfection with a plasmid encoding a SM does not directly select the best gag-pol-env-expressing cells. The new retroviral packaging cell lines overcome these problems.
                                                                                                                                                                                                      Packaging-deficient construct; viral gag-pol gene; packaging cell line; moloney murine leukaemia virus; MOMLV; viral env gene; helper construct;

- comprise selectable gene downstream of gene of interest, are selectable due to the in-efficiency associated with translation re-initiation

Claim 13; Fig 9; 79pp; English.

This sequence is a packaging-deficient construct having a viral envolutions.

This sequence is a packaging-deficient construct having a viral env gene care (in this case from the moloney murine leukaemia virus) and a selectable marker (SM). It is an example of a recombinant expression vector (REV) of the invention comprise a gene of interest (GDI) and a SM gene. The REVS of the invention comprise a gene of interest (GDI) and a SM gene. The SM gene is arranged downstream of the GOI and a GOI associated stop codon is spaced from a start codon of the SM gene to ensure that the SM protein is expressed as a result of translation reinitiation. The cell lines are transformed with two REVs, both are replication deficient, one contains the viral gag-pol gene, the other the viral env gene. By using helper constructs, such as the REV's, which are directly selectable and which provide for high expression of the viral gene, high titre retroviral constructs may be obtained. The packaging cell lines are useful for gene therapy. Prior packaging cell lines using full length retroviral genomes as helper genomes were isolated by cotransfecting them with plasmids curing the passages of the cells in culture and the current packaging systems provide limited titres of infectious retroviral vectors.

Co-transfection with a plasmid encoding a SM does not directly select the best gady pol-env. expressing cells. The new retroviral packaging cell incentive. This sequence represents the recombinant expression plasmid FBdelPASAF lines overcome these problems.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This sequence represents the recombinant expression plasmid FBdelPASAF.

This sequence is a packaging-deficient construct having a viral env gene
(in this case from the molonowy murine leukaemia virus) and a selectable
marker (SM). It is an example of a recombinant expression vector (REV) of
the invention, used to create a packaging cell line. The REVs of the
invention comprise a gene of interest (GOI) and a SM gene. The SM gene is
arranged downstream of the GOI and a GOI associated stop codon is spaced
from a start codon of the SM gene to ensure that the SM protein is
c expressed as a result of translation reinitiation. The cell lines are
transformed with two REVs, both are replication deficient, one contains
the viral gag-pol gene, the other the viral env gene. By using helper
constructs, such as the REVs's, which are directly selectable and which
provide for high expression of the viral gene, high titre retroviral
vectors may be obtained. The packaging cell lines are useful for gene
therapy. Prior packaging cell lines using full length retroviral
encoding selectable markers. However, the helper functions can be lost
current as a season of the cells in culture and the current packaging
curring the passages of the cells in culture and the current packaging
                                                                                                                                                                                                                                                                                                                                               Packaging-deficient construct; viral gag-pol gene; packaging cell line; moloney murine leukaemia virus; MOMLV; viral env gene; helper construct;

YA COMPINE Selectable gene downstream of gene of interest, are selectable due to the in-efficiency associated with translation re-initiation.

YX SI Selectable due to the in-efficiency associated with translation of the in-efficiency associated with translation of the in-efficiency associated with translation.

XX C C This sequence represents the recombinant expression plasmid FEdelPASAF.

This sequence represents the recombinant expression plasmid FEDELPASAF.

This sequence represents the recombinant expression plasmid FEDELPASAF.

This sequence represents as a selectable marker (5M). It is an example of a recombinant expression vector (RRY) of the invention used to create interest (GOI) and a SM gene is a rarnaged downstream of the CC of and a GOI associated stop codon is spaced from a start codon of the interest (GOI) and a SM gene is a rarnaged downstream of the cC C of and a GOI associated stop codon is spaced from a start codon of the constant on remittation. The call lines are transformed with two REVs, oth are replicated of efficient, one contains the viral gap rol gene, the viral env gene. By using helper constructs, such as the RIVEN selectable and which provide for high expression of the viral gene, high titre retroviral vectors may be obtained. The construct packaging cell lines are useful for gene therapy. Prior packaging cell lines using full length retroviral vectors may be obtained inmited the coding a SM does not directly select the best agar-pol-env-expressing cells. The new retroviral packaging cell lines constructs and percent constructs and percent coding a SM does not directly select the best agar-pol-env-expressing cells. The new retroviral packaging cell lines overcome these problems.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 170, Application US/08899575
Patent No. 5770440
GENERAL INFORMATION:
APPLICANT: Burton, Dennis R
APPLICANT: Lerner, Richard A
TITLE OF INVENTION: TO HUMAN NEUTRALIZING MONOCLONAL ANTIBODIES
TITLE OF INVENTION: TO HUMAN IMMUNOBERCIENCY VIRUS
NUMBER OF SEQUENCES: 170
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ADDRESSEE: Patent Counsel
